

# Reckoner BBB-B CLO Annual ETF

**Ticker: RCLY**

**Exchange: NYSE ARCA**

Summary Prospectus

**February 10, 2026**

[www.reckoner.com/RCLY](http://www.reckoner.com/RCLY)

Before you invest, you may want to review the Reckoner BBB-B CLO Annual ETF (the “Fund”) statutory prospectus and statement of additional information, which contain more information about the Fund and its risks. The current statutory prospectus and statement of additional information dated February 4, 2026, are incorporated by reference into this Summary Prospectus. You can find the Fund’s statutory prospectus, statement of additional information, reports to shareholders and other information about the Fund online at [www.reckoner.com/RCLY](http://www.reckoner.com/RCLY). You can also get this information at no cost by calling 1-800-617-0004.

## Investment Objective

The Fund seeks total return, while seeking to make only one dividend or distribution payment per annum.

## Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy, hold, and sell shares of the Fund (“Shares”). **You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and Example below.** The expenses shown in the table and the Example reflect the expenses of both the Fund and the Fund’s proportionate share of the expenses of Reckoner BBB-B CLO ETF (“RCLO”).

<b>Shareholder Fees (<i>fees paid directly from your investment</i>)</b>	None
<b>Annual Fund Operating Expenses</b> ( <i>expenses that you pay each year as a percentage of the value of your investment</i> )	
Management Fee <sup>1</sup>	0.55%
Distribution and/or Service (12b-1) Fees	0.00%
Other Expenses <sup>2</sup>	0.00%
<b>Total Annual Fund Operating Expenses</b>	<b>0.55%</b>

<sup>1</sup> The Fund’s management fee is 0.05% and the expense ratio of RCLO is 0.50%. The fee table and expense example reflect the expenses of both the feeder and the master fund, respectively.

<sup>2</sup> Estimated for the current fiscal year.

## Example

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your Shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain the same. The Example does not take into account brokerage commissions that you may pay on your purchases and sales of Shares. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

<b>1 Year</b>	<b>3 Years</b>
\$56	\$176

## Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). As a shareholder of RCLO, the Fund bears its ratable share of the transaction costs associated

with the portfolio turnover of RCLO. A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in the Total Annual Fund Operating Expenses or in the Example, affect the Fund's performance. Because the Fund is newly organized, portfolio turnover information is not yet available.

### **Principal Investment Strategies**

The Fund is an actively-managed exchange-traded fund ("ETF") that seeks to achieve its investment objective by investing all of its assets in Reckoner BBB-B CLO ETF ("RCLO") in a master/feeder structure in which the Fund is the feeder fund and RCLO is the master fund. Reckoner Capital Management LLC, investment adviser to RCLO and the Fund (the "Adviser"), seeks to manage the Fund's portfolio such that the Fund makes only one payment of any dividend or other income distributions to shareholders each year. The strategy has been designed for investors seeking to achieve exposure to RCLO, but who do not want to receive dividend or distribution payments (including income or capital gains distributions) more than once per year. There is no guarantee that the Fund will be able to minimize paying dividends and distributions. In implementing this strategy, the Fund may be entirely invested in cash, rather than RCLO, for certain temporary periods.

Under normal circumstances, the Fund invests at least 80% of its net assets (plus any borrowings made for investment purposes) in investments that provide exposure to debt tranches of collateralized loan obligations ("CLOs") of any maturity or duration that are rated, at the time of purchase, between and including BBB+ and B- (or equivalent by a nationally recognized statistical rating organization ("NRSRO")). The Fund complies with this policy by investing substantially all of its assets in RCLO. An NRSRO is a credit rating agency that issues credit ratings and is subject to regulatory oversight by the SEC. For purposes of RCLO's investments, a CLO must be rated between BBB+ and B- (or equivalent) by at least one NRSRO, such as Standard and Poor's Financial Services LLC ("S&P®"), Fitch Ratings, Inc. ("Fitch") or Moody's Investors Service, Inc. ("Moody's"), or, if unrated, determined by the Adviser to be of comparable quality. If a security receives different ratings from different NRSROs, RCLO will treat the security as being rated in the highest rating category received from an NRSRO. After purchase, a CLO's rating may decline below the minimum rating required by RCLO for purchase. In such cases, the Adviser will consider whether continuing to hold the CLO is in the best interest of RCLO.

CLOs are structured products that are trusts or other special purpose vehicles that issue multiple tranches of asset-backed securities. CLOs are collateralized by a pool of loans, which may include domestic and foreign senior secured loans, senior unsecured loans, and subordinate corporate loans, most of which may individually be rated below investment grade (or the equivalent if unrated). These pools may consist of "leveraged loans," or loans subject to higher interest rates relative to other loans. RCLO invests primarily in BBB through BB rated debt tranches of CLOs. RCLO may have up to 70% of its net assets (plus any borrowings made for investment purposes) in CLOs rated below investment grade (BB+ or lower) at the time of purchase. RCLO will focus on mezzanine or lower priority CLOs tranches. RCLO may also invest up to 10% of its net assets (plus any borrowings made for investment purposes) in CLOs rated BBB+ (or equivalent) or higher by an NRSRO.

RCLO is actively managed and does not seek to track the performance of any particular index. RCLO may purchase CLOs in both the primary markets (i.e., directly from the CLO issuer) and secondary markets (i.e., markets where the securities are traded following the initial offering). RCLO will only invest in CLOs with a minimum initial total offering size of \$250 million. RCLO will invest primarily in CLOs that are U.S. dollar denominated. RCLO will generally invest in floating-rate CLOs, though RCLO may invest in CLOs with fixed rates. RCLO is "non-diversified" under the 1940 Act, meaning that it may invest a relatively high percentage of its assets in a limited number of issuers. RCLO will not invest more than 20% of its net assets (plus any borrowings made for investment purposes) in any single CLO or CLOs managed by any single CLO manager.

The Adviser applies a bottom-up approach to select CLOs for investment by RCLO through the use of due diligence and review of documentation, including newly issued CLOs and CLOs traded in the secondary market, based on an assessment of the following criteria:

- The investment skill and process of the manager(s) of the CLO, including a manager's track record, experience and overall appetite for risk, under normal and stressed market conditions, and across "credit cycles," or multi-year cycles broadly reflecting the relative access to credit by borrowers across the market;

- The structure of an individual CLO and its underlying collateral;
- The ability of a CLO to meet its principal and interest payment obligations, under normal and stressed market conditions;
- The CLO's overall cash flow; and
- Trading frequency in the secondary market.

Depending on general industry trends or market conditions, the Adviser may adjust the overall mix of RCLO's investments within the percentage parameters discussed above to provide wider exposure to a variety of CLO manager investment styles. RCLO may also invest in other ETFs that have similar investment strategies involving CLOs.

### Principal Investment Risks

The principal risks of investing in the Fund are summarized below. The principal risks are presented in alphabetical order to facilitate finding particular risks and comparing them with the risks of other funds. Each risk summarized below is considered a "principal risk" of investing in the Fund, regardless of the order in which it appears. As with any investment, there is a risk that you could lose all or a portion of your investment in the Fund. Some or all of these risks may adversely affect the Fund's net asset value ("NAV"), trading price, yield, total return and/or ability to meet its investment objective. Given the master/feeder structure that the Fund utilizes many of these risks are assumed by the Fund through its investments in RCLO (references to the term "Fund" in this section may also refer to RCLO). The following risks could affect the value of your investment in the Fund:

- **Management Risk.** The Fund is actively managed and its ability to achieve its investment objective is dependent on the Adviser's successful implementation of the Fund's investment strategies. The Adviser's evaluations and assumptions regarding issuers, securities, and other factors may not successfully achieve the Fund's investment objective given actual market conditions.
- **Novel Structure Risk.** The Fund pursues its objective by investing substantially all of its assets in RCLO in a master/feeder structure in which the Fund is the feeder fund and RCLO is the master fund. The ability of the Fund to meet its investment objective is directly related to the ability of RCLO to meet its investment objective. The Adviser receives fees for managing RCLO, in addition to the fees paid to the Adviser by the Fund. The Fund will bear its pro rata portion of the expenses incurred by RCLO. Substantial redemptions by other investors in RCLO may affect RCLO's investment program adversely and limit the ability of RCLO, and the Fund, to achieve their investment objectives.

There may be potential conflicts of interest when the Adviser makes investment decisions for the Fund and RCLO given the master-feeder structure and the Fund's intention to only make one payment of any dividend or other income distribution to shareholders each year. Large purchases and redemptions by the Fund of RCLO's shares may cause RCLO to buy or sell investments, which may increase transaction costs, create market impacts, cause RCLO to realize gains or losses and/or impact the market price, bid-ask spreads and premiums/discounts of the Fund's and RCLO's shares. These actions may adversely affect the performance of the Fund, RCLO and their shareholders.

Because the Fund relies on a statutory exemption to invest in shares of RCLO beyond the normal limits set forth in the 1940 Act, the Fund is limited with respect to the other types of investments in which it can invest. Accordingly, the Fund may hold significant amounts of cash for certain temporary periods, which may adversely affect the Fund's performance, market price, bid-ask spreads and premium/discounts.

- **Collateralized Loan Obligations Risk.** A CLO is a securitization vehicle collateralized by a pool of credit-related assets. Accordingly, CLO securities present risks similar to those of other types of credit investments, including default (credit), interest rate, and prepayment risks. The extent of these risks depend largely on the type of securities used as collateral and the class of the CLOs in which the Fund invests. In addition, CLOs are often governed by a complex series of legal documents and contracts, which increases the risk of dispute over the interpretation and enforceability of such documents relative to other types of investments. There is also a risk that the trustee of a CLO does not properly carry out its duties to the CLO, potentially resulting in loss to the CLO.

The Fund intends to invest primarily in BBB and BB tranches (or equivalent by an NRSRO) that are subordinate to higher-rated tranches (e.g., tranches rated AAA+ through A-) in terms of payment priority. Subordinated (i.e., mezzanine) CLO tranches are subject to higher credit risk and liquidity risk relative to more senior CLO tranches. Mezzanine tranches may be of investment grade (i.e., BBB) or non-investment grade quality (i.e., BB+ or below), and the Fund may have significant exposure to below investment grade CLO tranches (potentially up to 70% of its total assets). To the extent a CLO or its underlying loans experience default or are having difficulty making principal and/or interest payments, subordinated CLO tranches will be more likely to experience adverse impacts, and such impacts will be more severe, relative to more senior or higher-rated CLO securities, which in turn will adversely affect the performance of the Fund. In a CLO structure, senior tranches have payment priority over mezzanine tranches (i.e., the tranches that the Fund invests in).

- **Affiliated Fund Risk.** The Fund invests all of its assets in shares of RCLO, which is an affiliate of the Fund and is advised by the Adviser. The Adviser will generally receive fees for managing RCLO, in addition to the fees paid to the Adviser by the Fund. In addition, the Adviser may have a conflict of interest when making investment decisions for the Fund and RCLO, including with respect to the intended income and dividend distribution schedules for the Fund. Large purchases and sales by the Fund of RCLO's shares may cause RCLO to buy or sell investments, which may increase transaction costs, create market impact, and cause RCLO to realize gains or losses. These actions may adversely affect the performance of the Fund, RCLO and their shareholders.
- **Tax Risk.** The Fund's investment and reinvestment strategy could implicate complex tax rules that may affect the amount, character, and timing of recognition of the gains and losses by the Fund and its shareholders for U.S. federal income tax purposes. For example, such rules, if applicable, could defer the timing of losses for the Fund or convert the character of recognized gains realized by shareholders in part or in whole upon the disposition of Fund Shares. In addition, these complex tax rules could affect the Fund's ability to limit dividend distributions to one annual payment and affect whether the Fund has distributed sufficient income and gains to eliminate entity level tax.
- **Large Transactions Risk.** To the extent a large proportion of the shares of RCLO or the Fund are held by a small number of shareholders (or a single shareholder), including funds or accounts over which the Adviser has investment discretion, the Fund is subject to the risk that these shareholders will purchase or redeem RCLO or Fund shares in large amounts rapidly or unexpectedly, including as a result of an asset allocation decision made by the Adviser. In addition, a large number of shareholders collectively may purchase or redeem RCLO or Fund shares in large amounts rapidly or unexpectedly (collectively, such transactions are referred to as "large shareholder transactions"). Large shareholder transactions could adversely affect the ability of RCLO or the Fund to conduct its investment program.
- **Market Risk.** The trading prices of securities and other instruments fluctuate in response to a variety of factors. These factors include events impacting the entire market or specific market segments, such as political, market, and economic developments, as well as events that impact specific issuers. The Fund's NAV and market price, like security and commodity prices generally, may fluctuate significantly in response to these and other factors. As a result, an investor could lose money over short or long periods of time. U.S. and international markets have experienced significant periods of volatility in recent years due to a number of these factors, including the impact of the COVID-19 pandemic and related public health issues, growth concerns in the U.S. and overseas, uncertainties regarding interest rates and trade tensions. In addition, local, regional, or global events such as war, including Russia's invasion of Ukraine, acts of terrorism, recessions, rising inflation, or other events could have a significant negative impact on the Fund and its investments. These developments as well as other events could result in further market volatility and negatively affect financial asset prices, the liquidity of certain securities, and the normal operations of securities exchanges and other markets.
- **High Yield Securities Risk.** The Fund intends to invest a significant portion (potentially up to 70% of its total assets) in CLO securities rated below investment grade. Debt investments rated below investment grade are sometimes referred to as high yield or "junk". Investing in lower-rated or unrated securities (including CLOs) involves special risks in addition to the risks associated with investments in higher-rated debt securities, including a high degree of credit risk. These securities may be more sensitive than investment grade CLO securities to economic, political, or market changes or developments which could impact the underlying loans of a CLO and may adversely affect the value of the below investment grade

CLO security. Issuers of the below investment grade loans that underlie a CLO may not be as financially durable as those issuers with higher credit ratings. Such issuers may be more susceptible to losses and real or perceived adverse economic and competitive industry conditions than higher-grade securities. The secondary markets on which lower-rated or unrated securities are traded may be less liquid than the market for higher-grade securities. Less liquidity in the secondary trading markets could adversely affect and cause large fluctuations in the value of such investments. Adverse publicity and investor perceptions, whether based on fundamental analysis, may decrease the values and liquidity of lower-rated or unrated securities, especially in a thinly traded market. It is possible that a major economic recession could severely disrupt the market for such securities and may have an adverse impact on the value of such securities. In addition, it is possible that any such economic downturn could adversely affect the ability of the issuers of such securities to repay principal and pay interest on the bonds and increase the incidence of default of such securities. The use of credit ratings as the sole method of evaluating lower-rated or unrated securities can involve certain risks. For example, credit ratings evaluate the safety of principal and interest payments, not the market value risk of lower-rated securities. In addition, credit rating agencies may fail to change credit ratings in a timely fashion to reflect events since the security was rated. These risks may be present in lower rated CLO securities (such as those rated BBB or BBB-, or their equivalent), even if they are not rated below investment grade.

- **Collateralized Loan Obligations Leveraging Risk.** CLOs are typically leveraged, and such leverage will magnify the loss on CLO investments, which may in turn magnify the loss experienced by the Fund. The cumulative effect of the use of leverage with respect to any investments in a market that moves adversely to such investments could result in a substantial loss that would be greater than if the Fund's investments were not leveraged.
- **Collateralized Loan Obligations Manager Risk.** CLO managers are responsible for selecting, managing, and replacing the underlying collateral assets within a CLO. CLO managers may have limited operating histories, may be subject to conflicts of interests, including managing the assets of other clients or other investment vehicles, or receiving fees that incentivize maximizing the yield, and indirectly the risk, of a CLO. Adverse developments with respect to a CLO manager, such as personnel and resource constraints, regulatory issues, or other developments that may impact the ability and/or performance of the CLO manager, may adversely impact the performance of the CLO debt tranches in which the Fund invests.
- **Covenant Lite Loan Risk.** CLOs may contain underlying loans that may be "covenant lite," meaning that they have few or no financial maintenance covenants that would require the borrower to meet or exceed certain financial requirements. The absence of such covenants may reduce the ability of the lender to monitor the borrower's financial performance and, if necessary, declare an event of default which would permit the lender to take action intended to mitigate losses from the borrower's default on the loan. Therefore, CLOs with holdings of covenant lite loans may have greater difficulty in seeking remedies or taking other actions to preserve the value of loans in situations where a borrower faces declining financial performance. This could result in losses to the CLO and therefore the Fund.
- **Debt Securities Risk.** Investments in debt securities subject the holder to the credit risk of the issuer. Credit risk refers to the possibility that the issuer or other obligor of a security will not be able or willing to make payments of interest and principal when due. Generally, the value of debt securities will change inversely with changes in interest rates. To the extent that interest rates rise, certain underlying obligations may be paid off substantially slower than originally anticipated and the value of those securities may fall sharply. During periods of falling interest rates, the income received by the Fund may decline. If the principal on a debt security is prepaid before expected, the prepayments of principal may have to be reinvested in obligations paying interest at lower rates. Debt securities generally do not trade on a securities exchange making them generally less liquid and more difficult to value than common stock.

The Fund's investments in debt securities may subject the Fund to the following risks:

- **Call Risk.** CLO securities are issued with a non-call period. After the end of the non-call period, the majority investor in the equity tranche can call (*i.e.*, redeem or refinance) the securities issued by the CLO in full. The Fund may not be able to accurately predict when or which of its CLO investments

may be called, resulting in the Fund possibly having to reinvest the proceeds in unfavorable market conditions (*i.e.*, at lower spreads), which could cause a decline in the Fund's income.

- *Credit Risk.* Debt issuers and other counterparties may not honor their obligations. For CLOs, the primary source of credit risk is the ability of the underlying portfolio of loans to generate sufficient cash flow to pay investors on a full and timely basis when principal and/or interest payments are due. Default in payment on the underlying loans will result in less cash flow from the underlying portfolio and, in turn, less funds available to pay investors in the CLO.

The Fund may incur substantial losses on debt securities that are inaccurately perceived to present a different amount of credit risk than they actually do by the market, the Adviser, or the rating agencies. Credit risk is generally greater where less information is publicly available, where fewer covenants safeguard the investors' interests, where collateral may be impaired or inadequate, where little legal redress or regulatory protection is available, or where a party's ability to meet obligations is speculative. Additionally, any inaccuracy in the information used by the Fund to evaluate credit risk may affect the value of securities held by the Fund.

Obligations under debt securities held by the Fund may never be satisfied or, if satisfied, only satisfied in part.

Some securities are subject to risks as a result of a credit downgrade or default by a government, or its agencies or, instrumentalities. Credit risk is a greater concern for high-yield debt securities and debt securities of issuers whose ability to pay interest and principal may be considered speculative. Debt securities are typically classified as investment grade-quality (medium to highest credit quality) or below investment grade-quality (commonly referred to as high-yield or junk bonds). Many individual debt securities are rated by a third-party source, such as Moody's or S&P®, to help describe the creditworthiness of the issuer.

- *Extension Risk.* The Fund is subject to extension risk, which is the risk that the market value of some debt securities, particularly mortgage securities and certain asset-backed securities, may be adversely affected when bond calls or prepayments on underlying mortgages or other assets are less or slower than anticipated. Extension risk may result from, for example, rising interest rates or unexpected developments in the markets for the underlying assets or mortgages. As a consequence, the security's effective maturity will be extended, resulting in an increase in interest rate sensitivity to that of a longer-term instrument. Extension risk generally increases as interest rates rise. This is because, in a rising interest rate environment, the rate of prepayment and exercise of call or buy-back rights generally falls, and the rate of default and delayed payment generally rises. When the maturity of an investment is extended in a rising interest rate environment, a below-market interest rate is usually locked-in, and the value of the security reduced. This risk is greater for fixed-rate than variable-rate debt securities.
- *Floating Rate Obligations Risk.* Securities with floating or variable interest rates can be less sensitive to interest rate changes than securities with fixed interest rates, but may decline in value if their interest rates do not rise as much, or as quickly, as interest rates in general. Conversely, floating rate securities will not generally increase in value if interest rates decline. A decline in interest rates may result in a reduction of income received from floating rate securities held by the Fund and may adversely affect the value of the Fund's shares. The interest rate for a floating rate note resets or adjusts periodically by reference to a benchmark interest rate. Benchmark interest rates may not accurately track market interest rates.
- *Income Risk.* The Fund's income may decline if interest rates fall. The risk of decline in income is heightened when fixed income instruments held by the Fund have floating or variable interest rates.
- *Interest Rate Risk.* The market value of debt securities generally varies in response to changes in prevailing interest rates. Interest rate changes can be sudden and unpredictable. In addition, short-term and long-term rates are not necessarily correlated to each other as short-term rates tend to be influenced by government monetary policy while long-term rates are market driven and may be influenced by macroeconomic events (such as economic expansion or contraction), inflation expectations, as well as supply and demand. During periods of declining interest rates, the market value of debt securities generally increases. Conversely, during periods of rising interest rates, the market value of debt securities generally declines. This occurs because new debt securities are likely

to be issued with higher interest rates as interest rates increase, making the old or outstanding debt securities less attractive. In general, the market prices of long-term debt securities or securities that make little (or no) interest payments are more sensitive to interest rate fluctuations than shorter-term debt securities. The longer the Fund's average weighted portfolio duration, the greater the potential impact a change in interest rates will have on its share price. Also, certain segments of the fixed income markets, such as high quality bonds, tend to be more sensitive to interest rate changes than other segments, such as lower-quality bonds.

- **ETF Risks.** The Fund is an ETF and, as a result of its structure, it is exposed to the following risks:
  - *Authorized Participants, Market Makers, and Liquidity Providers Concentration Risk.* The Fund has a limited number of financial institutions that may act as APs. In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. Shares may trade at a material discount to NAV and possibly face delisting if either: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services, or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.
  - *Costs of Buying or Selling Shares Risk.* Due to the costs of buying or selling Shares, including brokerage commissions imposed by brokers and bid/ask spreads, frequent trading of Shares may significantly reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.
  - *Early Close/Trading Halt Risk.* An exchange or market may close or issue trading halts on specific securities, or the ability to buy or sell certain securities or financial instruments may be restricted, which may result in the Fund being unable to buy or sell certain securities or financial instruments. In such circumstances, the Fund may be unable to rebalance its portfolio, may be unable to accurately price its investments, and/or may incur substantial trading losses.
  - *Shares May Trade at Prices Other Than NAV Risk.* As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund's NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) which may result in a widening of the bid and asked spread, due to supply and demand of Shares or during periods of market volatility. This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for Shares in the secondary market, in which case such premiums or discounts may be significant.
  - *Trading Risk.* Although Shares are listed for trading on the NYSE Arca, Inc. (the "Exchange"), there can be no assurance that Shares will trade with any volume, or at all, on any stock exchange. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of the Fund's underlying portfolio holdings, which can be significantly less liquid than the Shares.
- **Extended Settlement Risk.** New issue CLOs purchased in the primary market typically experience extended settlement periods, often longer than seven days. During the settlement window, between purchasing and settlement, these securities are typically less liquid than secondary market purchases. During the settlement window, between purchasing and settlement, these securities are typically less liquid than secondary market purchases. In such circumstances the Fund bears a risk of loss if the value of the CLO declines before the settlement date or if the Fund is required to sell the CLO prior to settlement. There is also the risk that the security will not be issued or that the counterparty will not meet its obligation, resulting in a loss of the investment opportunity.
- **Liquidity Risk.** Liquidity risk refers to the possibility that the Fund may not be able to sell or buy a security at a favorable price or time. Consequently, the Fund may have to accept a lower price to sell a security, sell other securities to raise cash, or decline an investment opportunity, any of which could have a negative effect on the Fund's performance. Infrequent trading of securities also may lead to an increase in their price volatility. CLOs, and their underlying loan obligations, are typically not registered for sale to the public and therefore are subject to certain restrictions on transfer and sale, potentially making them less liquid than other types of securities. Additionally, when the Fund purchases a newly issued CLO security directly from the issuer (rather than from the secondary market), there often may

be a delayed settlement period, during which time the liquidity of the CLO may be further reduced. During periods of limited liquidity and higher price volatility, the Fund's ability to acquire or dispose of CLO securities at a price and time the Fund deems advantageous may be impaired.

- **Cash Risk.** To the extent the Fund holds cash rather than securities or other instruments in which it primarily invests, the Fund risks losing opportunities to participate in market appreciation and may experience potentially lower returns. Cash positions may subject the Fund to additional risks and costs, such as increased exposure to the custodian bank holding the assets and its creditworthiness. In certain economic conditions, the custodian bank may charge the Fund fees for holding cash.
- **Cash Transaction Risk.** The Fund may effect a portion of its creations and redemptions primarily for cash, rather than in-kind securities, and RCLO expects to effect most of its creations and redemptions primarily for cash, rather than in-kind securities. The Fund may be required to sell or unwind portfolio investments to obtain the cash needed to distribute redemption proceeds. This may cause the Fund to incur brokerage costs and/or recognize a capital gain that it might not have recognized if it had made a redemption in kind. As a result, the Fund may pay out higher annual capital gain distributions than if the in-kind redemption process was used. The use of cash creations and redemptions also may cause the Fund's Shares to trade in the market at wider bid-ask spreads or greater premiums or discounts to the Fund's NAV. Further, effecting purchases and redemptions primarily in cash may cause the Fund to incur additional costs, such as portfolio transaction costs. These costs can decrease the Fund's NAV.
- **Non-Diversification Risk.** As a "non-diversified" investment company under the 1940 Act, RCLO expects to invest a greater percentage of its assets in the securities of a single issuer or a lesser number of issuers than if it was a diversified fund. As a result, RCLO may be more exposed to the risks associated with and developments affecting an individual issuer or a lesser number of issuers than a fund that invests more widely. This may increase RCLO's or the Fund's volatility and cause the performance of a relatively small number of issuers to have a greater impact on RCLO's and the Fund's performance.
- **Other Investment Companies Risk.** The risks of investment in other investment companies, including ETFs, typically reflect the risks of the types of instruments in which the investment companies invest. By investing in another investment company, the Fund becomes a shareholder of that investment company and bears its proportionate share of the fees and expenses of the other investment company. Investments in ETFs are also subject to the "ETF Risks" described above.
- **Privately Issued Securities Risk.** CLOs generally are privately-issued securities and are normally purchased pursuant to Rule 144A or Regulation S under the Securities Act of 1933. Privately-issued securities typically may be resold only to qualified institutional buyers, in a privately negotiated transaction, to a limited number of purchasers, or in limited quantities after they have been held for a specified period of time and other conditions are met for an exemption from registration. Because there may be relatively few potential purchasers for such securities, especially under adverse market or economic conditions or in the event of adverse changes in the financial condition of the issuer, the Fund may find it more difficult to sell such securities when it may be advisable to do so or it may be able to sell such securities only at lesser prices than if such securities were more widely held and traded. At times, it also may be more difficult to determine the fair value of such securities for purposes of computing the Fund's NAV due to the absence of an active trading market. There can be no assurance that a privately-issued security previously deemed to be liquid when purchased will continue to be liquid for as long as it is held by the Fund, and its value may decline as a result.
- **New Fund Risk.** The Fund is a recently organized investment company with no operating history. As a result, prospective investors have no track record or history on which to base their investment decision.
- **Valuation Risk.** The Fund may hold securities or other assets that may be valued on the basis of factors other than market quotations. This may occur because the asset or security does not trade on a centralized exchange, or in times of market turmoil or reduced liquidity. There are multiple methods that can be used to value a portfolio holding when market quotations are not readily available. The value established for any portfolio holding at a point in time might differ from what would be produced using a different methodology or if it had been priced using market quotations. Portfolio holdings that are valued using techniques other than market quotations, including "fair valued" assets or securities, may be subject to greater fluctuation in their valuations from one day to the next than if market quotations were used. In addition, there is no assurance that the Fund could sell or close out a portfolio

position for the value established for it at any time, and it is possible that the Fund would incur a loss because a portfolio position is sold or closed out at a discount to the valuation established by the Fund at that time. The Adviser's ability to value investments may be impacted by technological issues or errors by pricing services or other third-party service providers.

- **Cybersecurity Risk.** Cybersecurity incidents may allow an unauthorized party to gain access to Fund assets or proprietary information, or cause the Fund, the Adviser, and/or other service providers (including custodians and financial intermediaries) to suffer data breaches or data corruption. Additionally, cybersecurity failures or breaches of the electronic systems of the Fund, the Adviser, or the Fund's other service providers, market makers, Authorized Participants ("APs"), the Fund's primary listing exchange, or the issuers of securities in which the Fund invests have the ability to disrupt and negatively affect the Fund's business operations, including the ability to purchase and sell Shares, potentially resulting in financial losses to the Fund and its shareholders.

## **Performance**

The Fund is new and therefore does not have a performance history for a full calendar year. In the future, performance information for the Fund will be presented in this section. Updated performance information is available on the Fund's website at [www.reckoner.com/RCLY](http://www.reckoner.com/RCLY).

## **Portfolio Management**

*Investment Adviser:* Reckoner Capital Management LLC

*Portfolio Managers:* John E. Kim, CEO of the Adviser, Timothy Wickstrom, Co-CIO of the Adviser, and Jared Finsterbusch, Vice President of the Adviser, have been the portfolio managers of the Fund since its inception in February 2026.

## **Purchase and Sale of Shares**

The Fund issues and redeems Shares at NAV only in large blocks known as "Creation Units," which only APs (typically, broker-dealers) may purchase or redeem. The Fund generally issues and redeems Creation Units in exchange for a portfolio of securities and/or a designated amount of U.S. cash.

Shares are listed on the Exchange, and individual Shares may only be bought and sold in the secondary market through a broker or dealer at market prices, rather than NAV. Because Shares trade at market prices rather than NAV, Shares may trade at a price greater than NAV (premium) or less than NAV (discount).

An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase Shares (the "bid" price) and the lowest price a seller is willing to accept for Shares (the "ask" price) when buying or selling Shares in the secondary market. The difference in the bid and ask prices is referred to as the "bid-ask spread."

Recent information regarding the Fund's NAV, market price, how often Shares traded on the Exchange at a premium or discount, and bid-ask spreads can be found on the Fund's website at [www.reckoner.com/RCLY](http://www.reckoner.com/RCLY).

## **Tax Information**

The Fund's distributions are generally taxable as ordinary income, qualified dividend income, or capital gains (or a combination), unless your investment is held in an individual retirement account ("IRA") or other tax-advantaged account. Distributions on investments made through tax-deferred arrangements may be taxed later upon withdrawal of assets from those accounts.

## **Financial Intermediary Compensation**

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank) (an "Intermediary"), the Adviser or its affiliates may pay Intermediaries for certain activities related to the Fund, including participation in activities that are designed to make Intermediaries more knowledgeable about exchange-traded products, including the Fund, or for other activities, such as marketing, educational training, or other initiatives related to the sale or promotion of Shares. These payments may create a conflict of interest by influencing the Intermediary and your salesperson to recommend the Fund over another investment. Any such arrangements do not result in increased Fund expenses. Ask your salesperson or visit the Intermediary's website for more information.
